## Задание №2

**Прочитайте текст, письменно переведите со словарем**

### ***Distance Learning***

Internet presents the largest and the most powerful network in the world. By linking a growing number of colleges, universities, schools, companies and citizens to the Internet, vast opportunities open up for the teachers at distance to bridge time and space in order to reach students. Distance learning is a term used to describe the learning process in which a source of knowledge and a recipient of knowledge are at a physical distance, and mediated by ICT (Information and Communications Technology). "There is no doubt that these technologies require a more modern and, according to functional logic, a more appropriate pedagogical-psychological and methodological-didactic theoretical basis as a necessary assumption of their immediate implementation in the planning, organization and implementation of distance education. All the more so if one takes into account the fact that the primary issue throughout the world is the struggle to increase the quality, efficiency and effectiveness of education. In this sense, distance education, supported by modern information technology, multimedia, offers almost limitless opportunities to users who, of course, must bear in mind its limitations". This technology would enable the monitoring of teaching from home, that is on a home personal computer when the student is unable to come to school for various reasons (illness, storm). It is important that online education serves as a supplement to traditional learning. All that we believe can be done better in a traditional classroom should remain. We must not allow online teaching to become its own purpose; it should be a type of teaching that will help us to improve our classical education.

### Задание №3

**Составьте мини-словарь на основе текста:**

#### **COMPUTERS IN HUMAN LIFE**

Computer is perhaps the best invention and one of the most significant achievements of human thought. A computer does not necessarily mean a monitor, keyboard, mouse and a CPU. A computer is any machine or device that can compute and execute instructions given to it in the form of programs. So technically, even a cell phone is a computer. And so are desktops, laptops, tablet PCs and PDAs. Anything that can perform a series of operations on its own is a computer. This gives us the idea how great the role of computers is. One of the most important advantages of computers is in the field of science for research and development. The satellites, the telescopes and almost all the research tools make use of computers.

Next important use of computers is in the medical field. Many high tech surgical machines and instruments are endowed with small computer systems so that any surgical process is recorded and monitored to avoid complications. Many clinical imaging processes are conducted with the help of computers, such as X-ray and CT scan, etc.

Computers are a must in the field of education. The Internet is a huge source of information. We surf the internet and simply need to google to find any information. Different universities deliver online degrees, and distance learning is spreading dramatically. Notebooks are used to write research paper and Word Processing software automatically corrects spelling and grammar mistakes.

Software is widely used in communication sphere. People can send messages by e-mail to a person who is thousands of miles away. Chat software enables one to chat with another person on a real-time basis. Video conferencing tools are becoming available.

Next, all financial transactions are done by computer software. They provide security, speed and convenience.

The field of entertainment has been revolutionized by computers. Animation, graphic image manipulation, movie making, music composition, three-dimensional model creating have made the entertainment experience hundred times better. Computer gaming is achieving new landmarks in terms of technology.

This is only the tip of the iceberg. Software engineers, writers, businessmen, employees in the field of telecommunication, banking, research, medicine use computers daily.

Finally, just imagine one day without using your PC or any computer based application. You will surely understand the importance of this «thinking machine» in your life.
