Technology powerfully amplifies the effects human beings on the atmosphere Prehistoric man withdrew from the atmosphere only the oxygen he required respiration; technological man consumes a far greater amount of oxygen to support fir power plants and chemical processes. The carbon dioxide produced by technology processes in the biosphere substances wholly new to it; man-made radio-isotopes are wide variety of synthetic materials such as plastics, insecticides, herbicides and numeric industrial materials. These, too, also alter the biosphere.

The problem has already been discussed at a large number of conferences, some them sponsored by the UN. However, relatively little has so far been done to environmental pollution.
